

ANTstripz®

The Professional Standard for Applying Ant Gel Baits.

ANTstripz - the Professional Standard

ANTstripz are the new standard for professionally applying ant gel baits in domestic, commercial, hospitality, government and school situations.

ANTstripz are a patented professional polymer platform onto which ant gel baits are applied. They incorporate a technology that allows them to be attached to flat smooth surfaces without tearing or leaving any residues when removed.

Suction Technology

The first thing you will notice is that they don't use glue to make ANTstripz adhere to surfaces. If glue was used this would make ANTstripz permanent and difficult to remove/cleanup.

ANTstripz innovative technology uses hundreds of miniature suction caps. In this way the product is easily removed without leaving any stains or residues - EVER!

This makes ANTstripz quick, simple and easy to apply (and remove) every time an ant gel bait is used.

Tough Construction

ANTstripz are made from a polymer (plastic) material. They won't tear, stain or leave any visible residues - EVER! This means you can use ANTstripz with confidence knowing that they won't damage the surface they are applied to.

Quick Identification

ANTstripz allow quick visual location and identification of where gel baits have been applied by the easily recognised bright yellow platform.

This means that repeat visits will allow quick identification of treatments.

Prevention of Moisture Loss

The polymer construction of the ANTstripz platform reduces moisture loss from gel baits into the treated surface - they create a moisture loss barrier between the gel and the attached surface. This enhances bait attractiveness and longevity.

Bait Consumption Monitor

ANTstripz provide an accurate platform from which to monitor bait consumption. Either the consumer or the pest controller can monitor consumption of bait accurately from the platform. This means bait can quickly and effectively be replaced (as a charged service call) as it is consumed by insect pests.

Ready Reckoner

Located on ANTstripz is a 5 cm to 7.5 cm guide to bait size application.

Current bait gels on the market give bait measurement indications for optimal treatment.

This helps you to not over apply treatments saving you money every time you use them.

Pest Treatment in Progress

ANTstripz are a visual identification to customers that an insect gel baiting treatment is in progress.

The ANTstripz platform is a signal to customers that the gel is in fact deliberate and not some inadvertent kitchen or food waste.

Bait Retaining Well

ANTstripz have an 'embossed' bait well around the ready reckoner guide. This facilitates the holding of gel baits that may have some liquid content in the gel structure. Note: This well is not intended to be used for liquid baits.

How Are They Packaged?

ANTstripz come in handy packs with 120 platforms ready to go when you are!
