

ANT ANT BAIT GEL PRO[®]

Complete Colony Control.

AttractANT PRO provides excellent control of a broad range of ant species including all key sugar and protein feeders. It is the solution of choice for Australian pest management professionals wishing to eradicate colonies of ants and reduce annoying call backs.

AttractANT PRO combines leading edge bait matrix technology with the effectiveness of a potent active ingredient, indoxacarb. This ensures rapid feeding on the super-palatable bait gel, followed by workers returning to the nest and passing the bait around the colony including the queen and larvae leading to rapid nest elimination.

Better Performance, Better Value.

The first thing you will notice when you pick up a tube of AttractANT PRO is that it comes in a MASSIVE 50 gram ready-to-use squeeze tube.

AttractANT PRO is similarly priced as the regular 30 gram tubes presently on the market which means you receive 66% more product for FREE. This translates into greater returns for pest management professionals.

Rapid Results .

Extensive field trials were carried out in all regions Australia-wide, against many ant species. In these trials an average of 98% control was achieved within 3 days on foraging ants and at 28 days the ants had not returned, indicating that the colonies had been eradicated.

Unique 'Secret' Attractant.

During field screening research and development it was discovered that a special carbohydrate was irresistible to a broader range of ants. However, this special carbohydrate is not used in any gel baits globally because it simply isn't possible to homogeneously mix it with current gel bait technology. This meant that a totally new bait matrix technology had to be developed in order to mix this complex carbohydrate with the bait matrix.

The result is AttractANT PRO, the first gel bait with a secret combination of unique polymer PLUS an exclusive carbohydrate which makes this the first choice in ant bait gel selection - target ant species simply find it irresistible.

PRODUCT SPECIFICATIONS

Better Performance. Better Value.

How AttractANT PRO controls the entire colony.

At the core of AttractANT PRO is the powerful active indoxacarb. This cutting edge active is bio-activated by the enzymes in the gut of ants. This interaction with the enzymes converts AttractANT PRO into a more effective insecticide. This bio-activation has the added advantage of a delay in mortality, ensuring the transfer of the toxicant through trophallaxis with the brood and queen resulting in nest collapse and total colony control.

It's Okay to Spray.

Field research demonstrates that AttractANT PRO provides excellent control of difficult to control ants when used as part of an integrated pest management treatment. AttractantPRO exhibits enhanced performance when used in combination with non-repellent residual treatments.

We recommend the use of Sundew EnsnaREPRO 50 Suspension Concentrate Residual insecticide spray treatment. EnsnaREPRO is a residual, non-repellent, non-staining water based formulation and is ideal for use

indoors and outdoors. EnsnaREPRO has an excellent user safety profile and is ideal for sensitive areas.

Sundew Solutions recommends the use of ANTAGONISTPRO 80 SC polymer enhanced bifethrin as an outdoor application in partnership with AttractANT PRO and EnsnaREPRO when pest management professionals are faced with a large infestation.

Tips for using AttractANT PRO.

- Thoroughly inspect the site when identify entry points and foraging areas.
- Pay particular attention in assessing the potential biomass of ants you are dealing with.
- Larger infestations will require more bait placements or repeat visits.
- Place sufficient bait to allow colony eradication and re-inspect in seven days to check for foraging ants.
- If the size of the infestation is regarded as large, consider using a non-repellent, non-staining spray treatment such as Sundew EnsnaREPRO 50SC insecticide.

Sundew recommends the application of SAS PRO Fipronil Granular Ant Killer to lawns, garden beds, etc.

AttractANT PRO in action

Every tube of AttractANT PRO comes with a free sample of ANTstripz

Sundew Solutions - the Ant Solutions Company

Sundew Ant Solutions are the result of years of extensive research and development and feature innovative formulation technology that can be used in sensitive situations for outstanding ant control. Sundew offers innovative solutions to help Pest Management Professionals solve any pest challenge. Our advanced products feature best-in-class formulation technology you can stake your reputation on.

® AttractANTPRO is a registered trade mark of Sundew Solutions Pty Ltd.
