

THE GREAT ALL-ROUNDER

MAXUM PRO

125 SC INSECTICIDE

Broad Spectrum Insecticide

MaxumPRO is an excellent fast acting knock-down insecticide developed for the control of public health pests as well as an extensive list of turf, ornamental, and native plants pests.

The active ingredient of MaxumPRO is beta cyfluthrin. MaxumPRO is odourless and stable in sunlight, alkaline conditions and in high temperatures. It is virtually insoluble in water and binds to treated surfaces where it is readily available to come into contact with target pests.

A Little Goes a Long Way

MaxumPRO is a concentrated 125g/L beta cyfluthrin formulation. One 500 mL container makes up to 250 litres of spray solution. This makes it much more economical than other synthetic pyrethroid sprays in its class.

UNIQUE FORMULATION SCIENCE

Controlled Particle Technology™

Controlled Particle Technology (CPT) offers the perfect bi-modal blend of tiny sub-micron particles that have been shown to give a rapid knock-down with a complement of larger particles which provide excellent

residual control on even the most porous surfaces.

This gives the best all-round performance on the market - fast acting on the largest range of surfaces.

Transigel Rheology System™

Transigel Rheology System (TRS) has been scientifically developed so that our products won't ever sediment in their original containers, and the uniquely low viscosity of our product once flowing gives you the best dilution properties on the market.

Mode of Action

MaxumPRO SC is highly active and will control the broad spectrum of general pests, turf, ornamental, native plants and public health pests at very low rates. It acts mostly as a contact insecticide but also has stomach poison activity. It penetrates the waxy insect cuticle very rapidly, resulting in a quick knock-down of the pest.

Maximum Flushing Action

MaxumPRO SC will flush pests out of their hiding places making the infestation very visible. This serves to impress the client about the size of

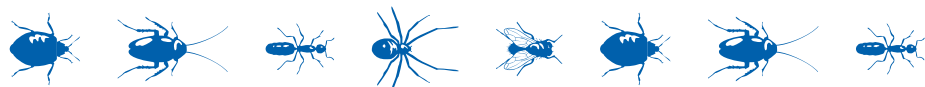

PRODUCT SPECIFICATIONS

Active constituent:	Beta cyfluthrin 126 g/L
Formulation type:	Suspension Concentrate
Pack Size:	500 mL
Chemical group:	Pyrethroid
Schedule:	S5

Pest Claims: Litter beetle, cockroaches, web and non-web spinning spiders, ants, fleas, flies and mosquitoes, silverfish, crickets, clothes moths, carpet beetles, bed bugs, stored product pests, millipedes, wasps, paralysis tick, armyworm, cutworm, webworm, adult billbug, adult Argentine stem weevil, adult scarabs (including African black beetle), mole crickets, couch mite, grasshoppers, sawfly larvae, aphids, bugs (e.g. passionvine hopper, mealybug, lace bug), caterpillars, garden weevil, whiteflies, and thrips

Key Features:

- Broad spectrum of activity
- Highly concentrated formulation - a little goes a long way
- Can be used indoors and outdoors
- Fast acting knock-down insecticide with excellent residual control
- Unique CPT and TRS technology

the problem and helps technicians locate cockroach harbourages.

Long Residual Life

The hardest pest to control is the German cockroach. Independent field trials have shown excellent results with over 90% control even after 18 weeks.

Public Health

MaxumPRO is approved for the treatment of cockroaches, web and non-web spinning spiders, ants, fleas, silverfish, crickets, clothes moths, carpet beetles, bed bugs, stored product pests, millipedes, wasps, paralysis tick, flies, mosquitoes, and littler beetle in poultry sheds.

Turf

MaxumPRO is approved for the following turf pests: Armyworm, cutworm, webworm, adult billbug, adult Argentine stem weevil, adult scarabs (including African black beetle), mole crickets, couch mite, ants and grasshoppers.

Native & Ornamental Plants

MaxumPRO is approved for Sawfly larvae and grasshoppers in Native and Ornamental plants.

Azaleas, Hibiscus, Pelargoniums, and Roses

MaxumPRO is approved to treat Aphids, bugs (e.g. passionvine hopper, mealybug, lace bug), caterpillars, garden weevil, whiteflies and thrips.

The GREAT All-Rounder

MaxumPRO is the great all-rounder because it is effective against a multitude of pests in a vast variety of situations. MaxumPRO is odourless and stable in sunlight, alkaline conditions and in high temperatures. This water based suspension formulation has excellent turf and plant safety and has earned the reputation as the 'great all-rounder'.

Better Performance. Better Value.

Perfect for tough commercial jobs

MaxumPRO is an excellent broad spectrum insecticide

SUPERIOR FORMULATION. SUPERIOR RESULTS.

Researched and developed from the ground up specifically for the modern pest manager, MaxumPRO® is effective against a multitude of general pest control problems - indoors and out. MaxumPRO® has an effective flushing action, good knock-down properties, and a long-lasting residual life. Boasting *Controlled Particle Technology*® and *Transigel Rheology System*® - formulation technologies found exclusively in Sundew formulations.
