

Quench[®] PRO

Ant Bait Liquid

Complete Colony Control.

QuenchPRO provides excellent control of a broad range of ant species including all key sugar feeders. It is the solution of choice for Australian pest management professionals wishing to eradicate colonies of ants.

QuenchPRO contains a proprietary blend of attractants that will quench the thirst of the fussiest liquid feeders. Formulated for ant trophallaxis, which allows foraging ants to return to the colony and feed the bait to larvae and the queen(s) so that the entire colony is eliminated.

Better Performance. Better Value.

The first thing you will notice with QuenchPRO Ant Bait Liquid is the extra large 'professional' sized 250 mL bottle. QuenchPRO also features the pharmaceutical precision tip applicator loved by pest managers.

Rapid Results.

Extensive field trials were carried out Australia-wide, against many sugar feeding ant species during the development of QuenchPRO. In these trials, on average control was achieved within 3 days on foraging ants.

Delayed Mode of Action.

QuenchPRO utilises the potent active ingredient, imidacloprid. The non-repellent and exceptional transfer properties of this ingredient are well known in the professional pest industry. This allows the wide dispersion throughout the colony for the ultimate in total control.

Heavy Infestation Situations.

When faced with a large infestation, we recommend the use of Sundew EnsnarePRO 50 SC non-repellent insecticide for indoor situations, and Sundew ANTagonistPRO 80 SC polymer enhanced bifenthrin for a robust outdoor solution.

PRODUCT SPECIFICATIONS

Active constituent:	Imidacloprid 0.05 g/L
Formulation type:	Ready to use liquid bait
Pack size:	250 mL bottle (SUN163)
Chemical group:	Neonicotinoid
Schedule:	Non scheduled

Pest Claims: Contains a sweet food source in a low dose bait that is effective against many common pest ants in indoor and outdoor situations.

Key Features:

- Highly attractive proprietary liquid bait matrix
- Extra large 250 mL professional pack
- Kills the queen and destroys the colony
- Researched and developed by Sundew Solutions
- Non scheduled poison
- Professional precision pharmaceutical tip applicator
- MADE IN AUSTRALIA
